

Embrace

peace of mind - independence - control

Problem

60% of wheelchairs are damaged during flight

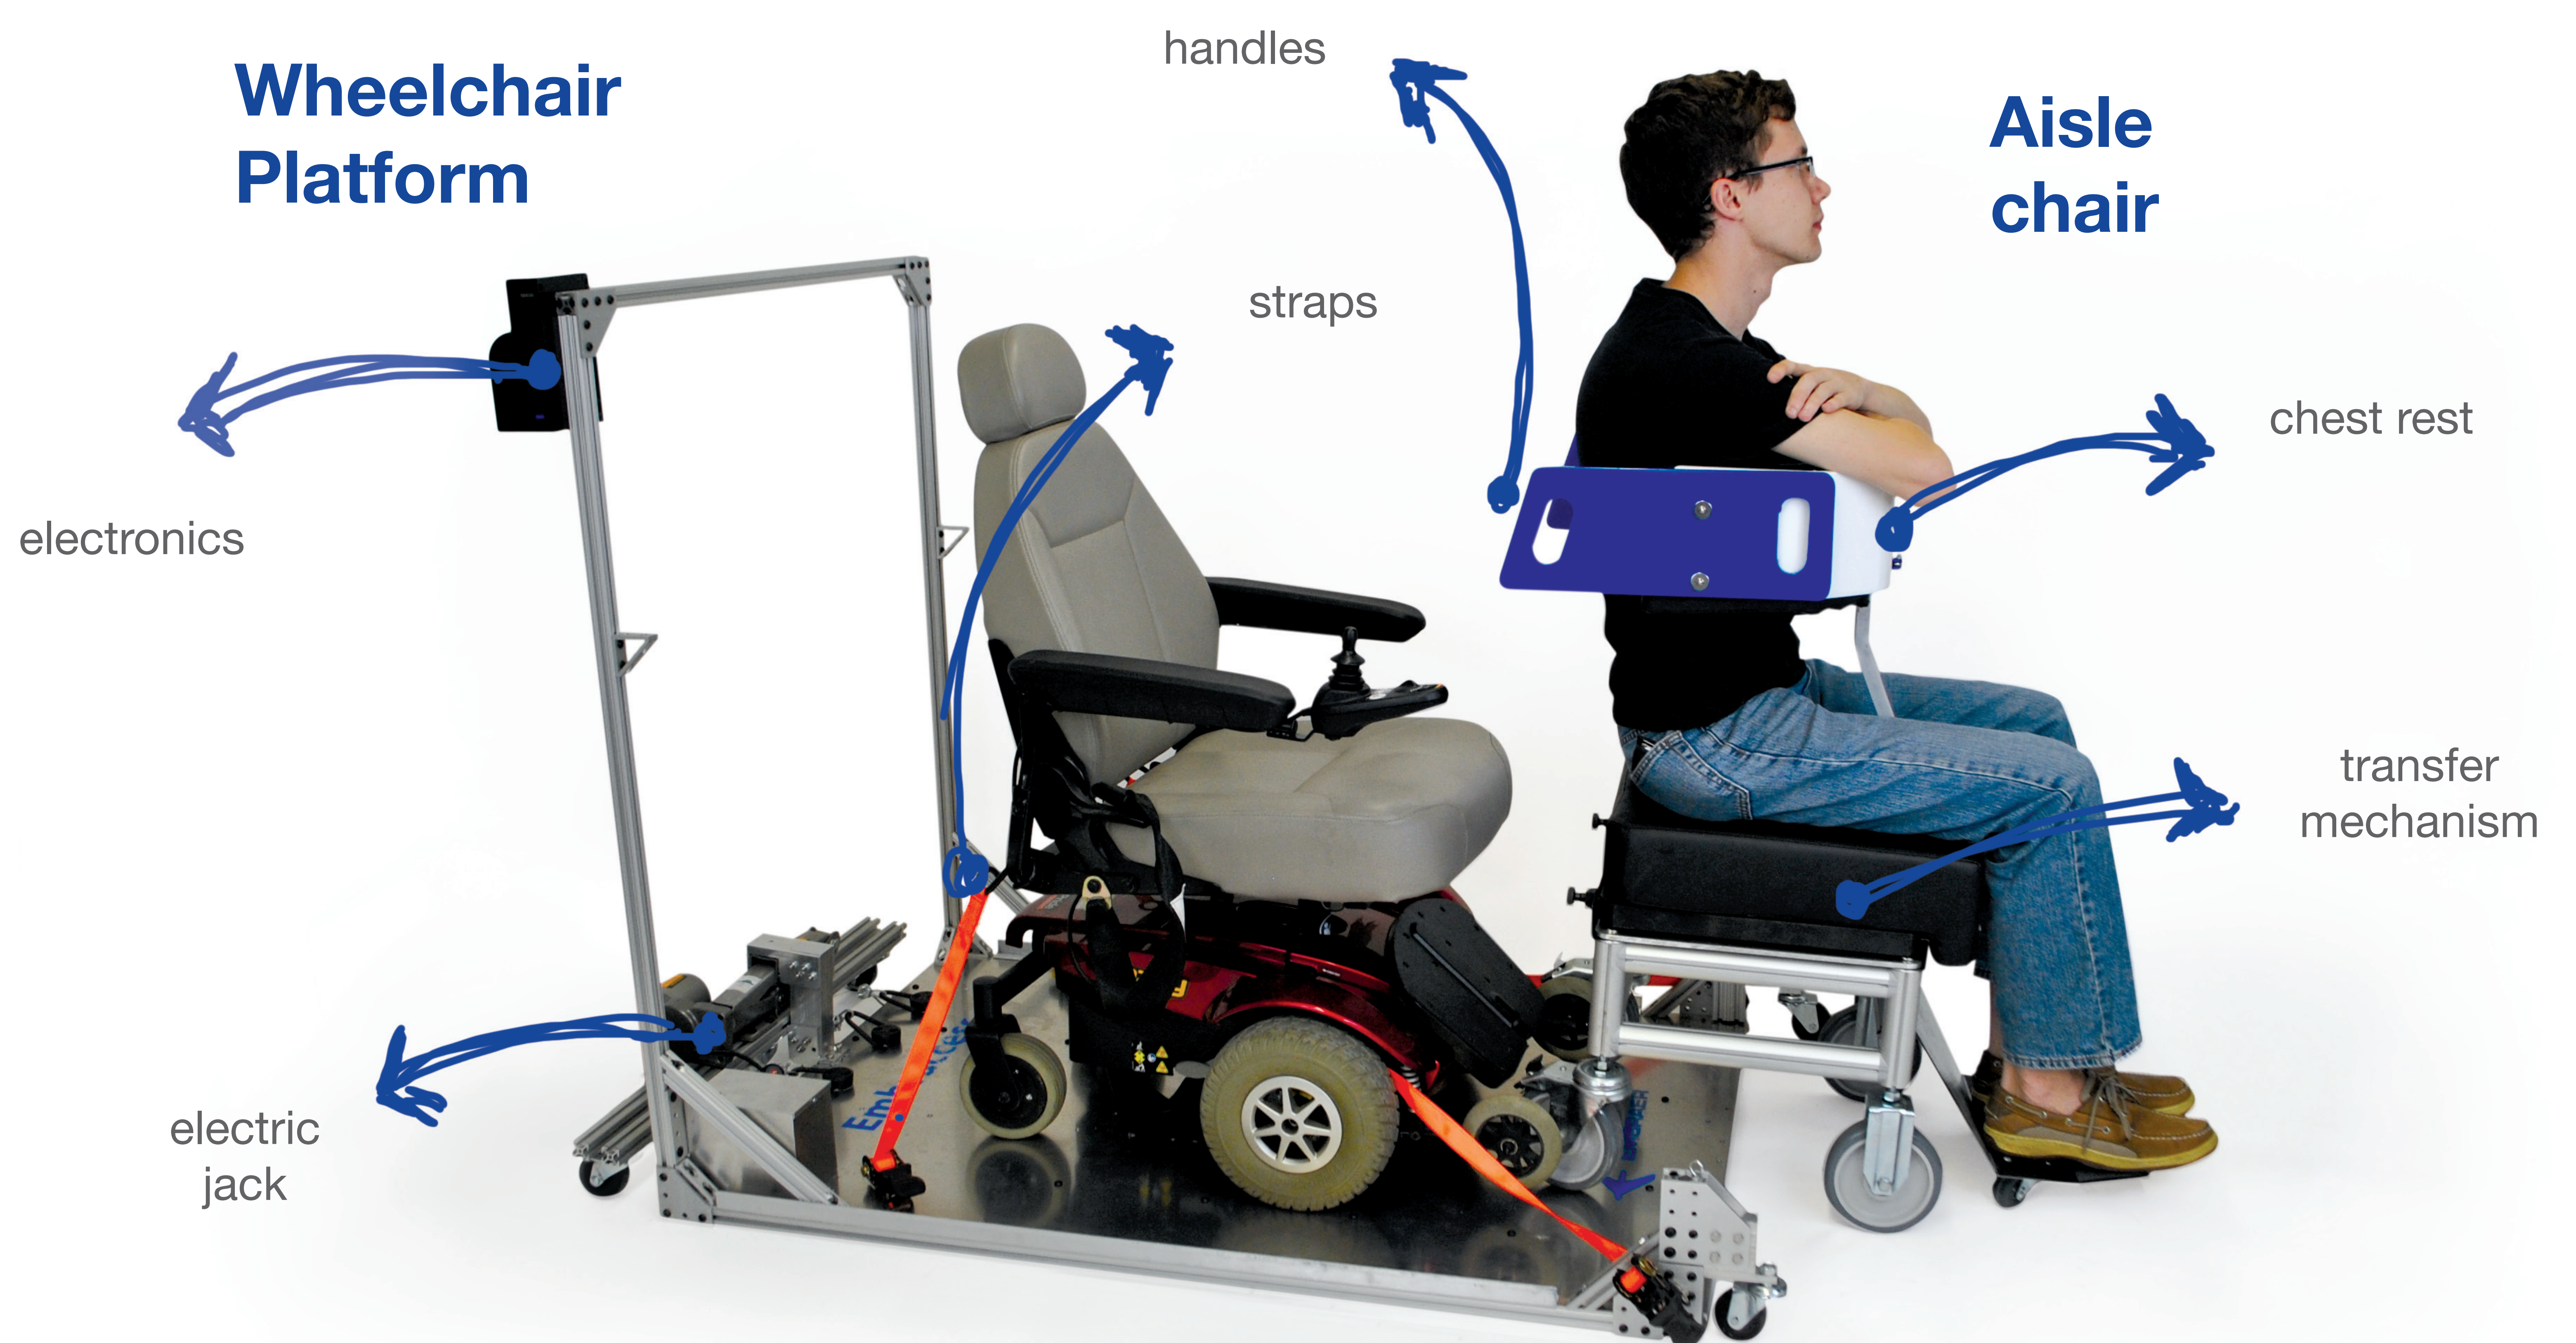

stressful and uncomfortable experience

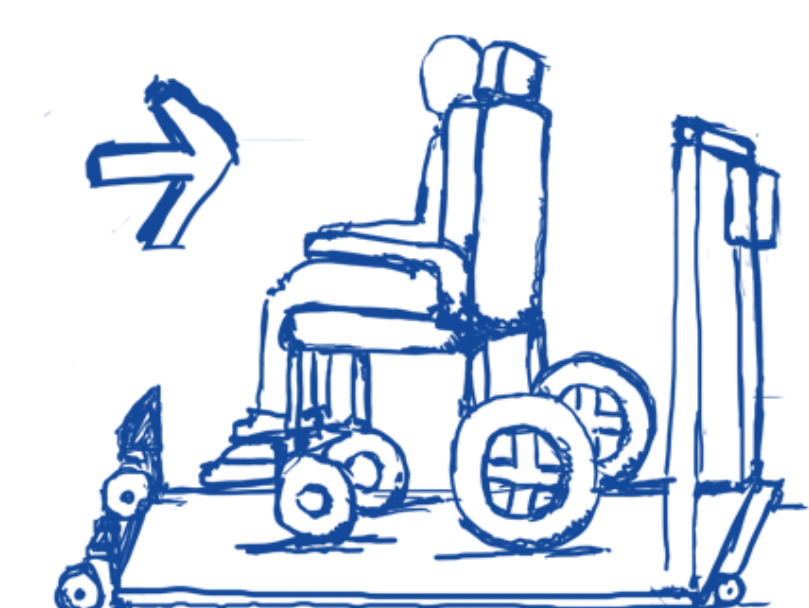

uncomfortable and unsafe transfers

Solution

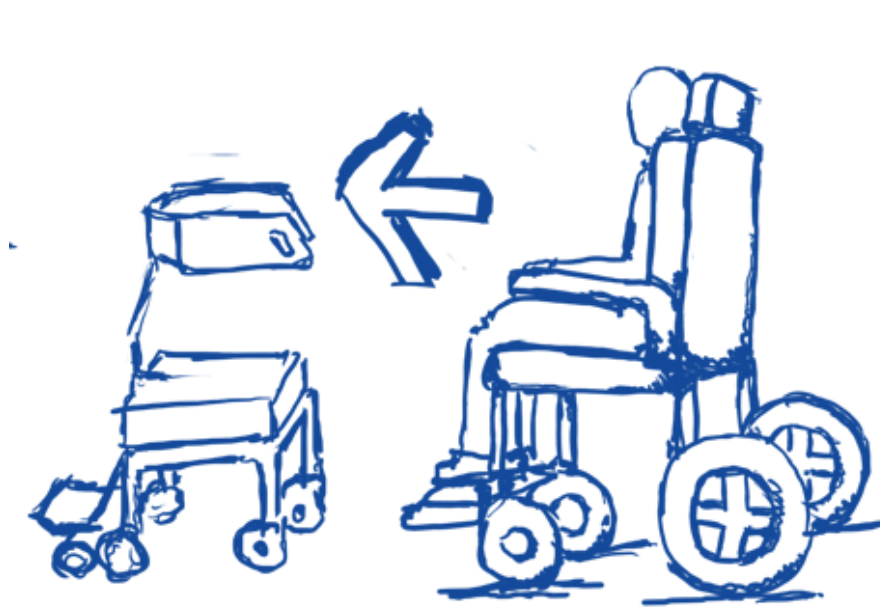

We are giving wheelchairs users the **piece of mind**, **independence** and **control** they deserve through the use of a rigid platform for their wheelchair and a safer, more comfortable transfer process.

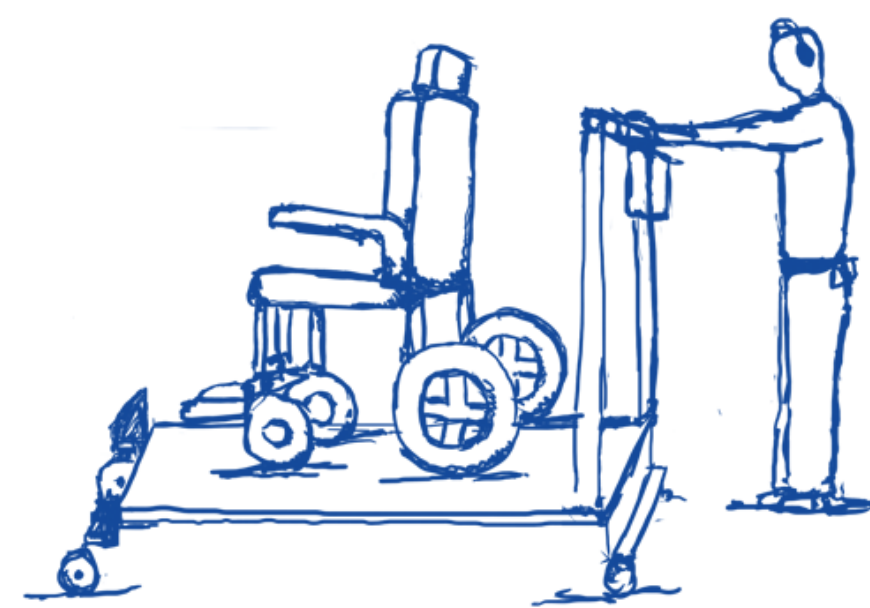

New experience

1 user drives on to the platform and oversees as it is strapped down.

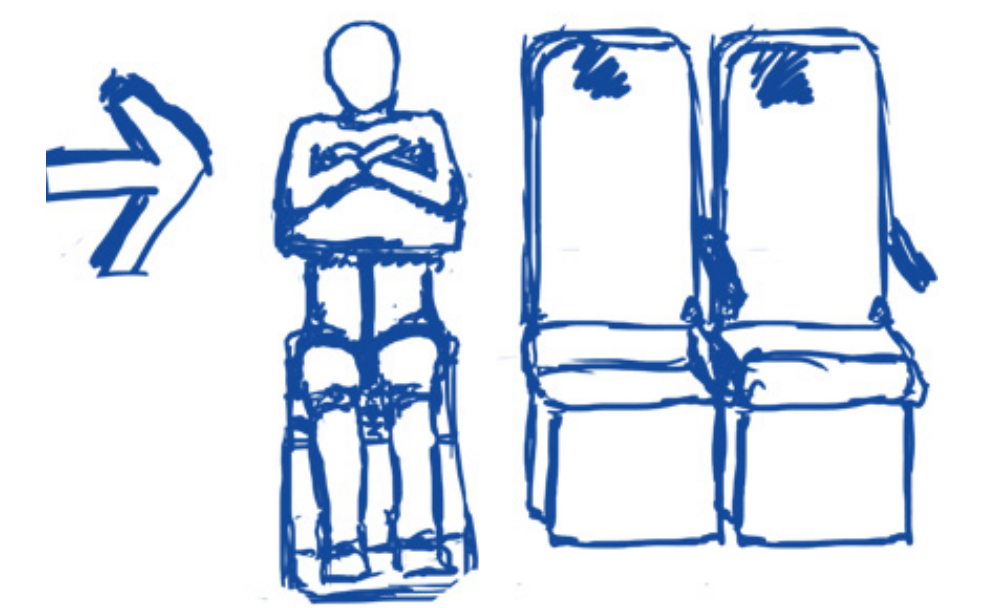

2 user transfers on to the new aisle wheelchair.

3 handler rolls the wheelchair platform away to the cargo hold.

4 flight personnel assists wheelchair user down the aisle.

5 user laterally transfers themselves onto their airplane seat.
